The latest development
in soft ice machines

COLORE & RAINBOW

The Carpigiani Colore & Rainbow

The Colore and Rainbow machines offer a new dimension to freshly made soft ice-cream, that confirm the great sales potential of this product.

The COLORE AND RAINBOW are part of a new range of technologically advanced machines that CARPIGIANI has specifically designed to pipe flavourings onto ice-cream as it is dispensed.

The hopper of the mix is located in the upper part of the machine whereas in the middle section you have the horizontal batch freeze cylinder whose extraction tap on the front dispenses ice-cream portions.

One of the three syrups (kept in three different containers in the lower part of the machine) is instantly piped onto the ice-cream.

THE EXCLUSIVE FEATURES

In the upper tank, an independent refrigeration system keeps the liquid mix at a constant temperature of +4° C either when the machine is being used or during breaks.

The mix feeds the production cylinder through a patented gear pump that pressurises the mix with air, boosting the growth of volume (up to 80% overrun).

The soft ice-cream produced by a special self-regulating beater in the batch freeze cylinder is constantly checked by the electronic system HARD-OTRONIC; in this way the operator can easily programme the consistency and quality best suited for the ice-cream.

A whole range of fruit and cream syrups specifically prepared for this machine can be piped onto the ice-cream.

In the lower part of the machine there are 3 different containers where the syrups are kept and through special pumps the flavours are added onto the ice-cream.

After selecting the flavour on the touch pad panel the syrup is instantly piped onto the ice-cream creating a mouth watering and colourful product.

THE PRODUCTION CYCLE OF COLORE & RAINBOW

Whilst the syrup-flavoured soft ice-cream is being dispensed by the extraction tap an equal quantity of mix goes from the upper refrigeration hopper to the batch freeze cylinder and almost immediately freezes. It is easy and simple to switch from flavour to flavour: at a touch of a button the chosen syrup is added to the ice-cream.

You can serve a colourful and tasty ice-cream in a simple and fast way.

SPECIAL FEATURES OF COLORE

The AES 381/p/SP Colore comes complete with the convenience of automatic pasteurisation again at the touch of a button providing the reassurance of a safe and healthy product day after day. By pasteurising the mix, and all the parts that are in operating contact with it the product is kept in perfect hygienic production.

To help make life simpler, the AES 381/p/SP Colore hoppers can also be directly filled with powder mix. The amount of water added to the mix can be controlled from the electronic display by pushing the correct button.

An eye catching appeal

The COLORE and RAINBOW are the latest development in the range of soft ice-cream machines that continue the CARPIGIANI concept of fresh soft ice-cream. The upper part of the machines are provided with colourful crowns showing pictures of a delicious and mouth watering ice-cream. Also the front and side panels are decorated with colourful rainbows and flavoured ice-cream decals.

The machines are equipped with practical accessories such as the mobile cones dispenser, shelves where you can put cups, spoons, serviettes and delicious toppings.

... AND TO MAKE THE ICE-CREAM ?

All the mixes can be used: from UHT liquid, powder, to freshly chilled.

... AND TO PIPE FLAVOUR ONTO THE ICE-CREAM ?

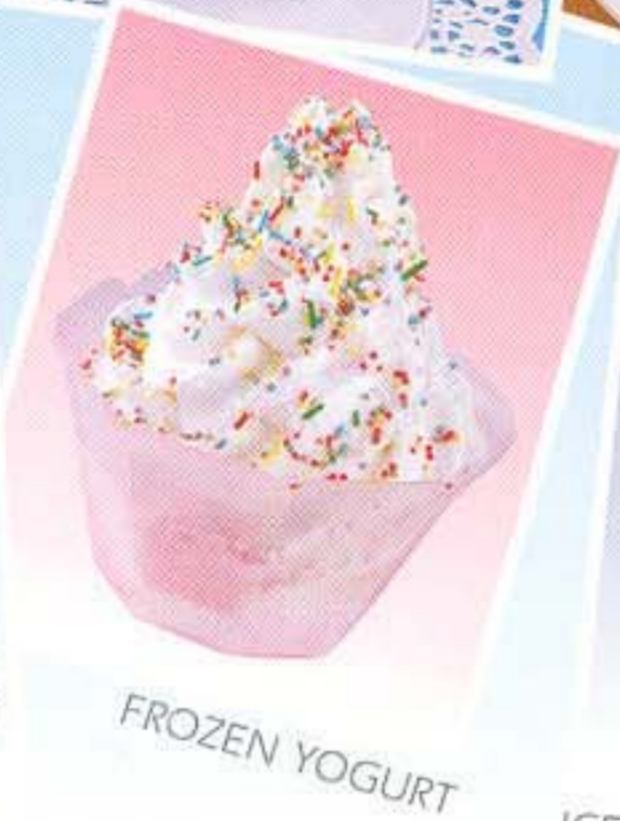

Both fruit syrups and cream syrups can be

used depending on the season of the year. The attractive and eye-catching accessories and point of sales material will make the perfect place for peak profit!

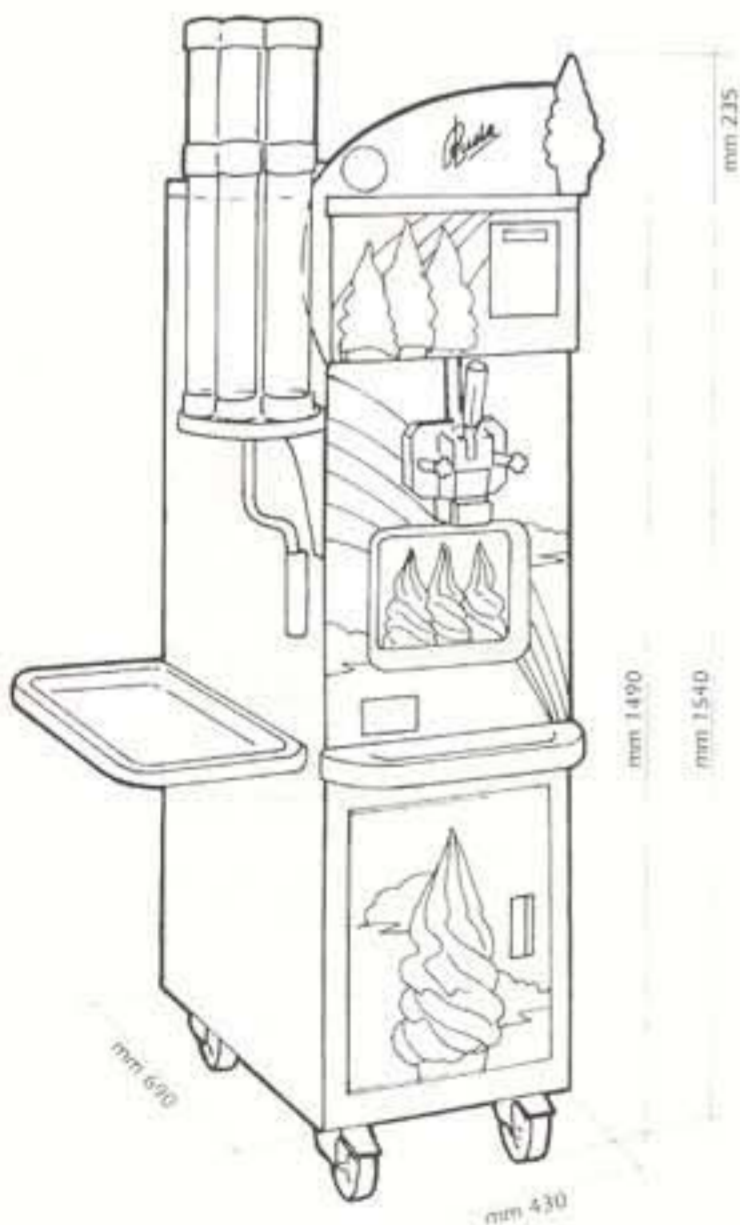

Carpigiani recommend to use specific syrups for this matter.

Rainbow is...

Technical features

- Refrigeration hopper with mix temperature always displayed on touch pad panel
- Light shows the low level of mix
- Patented gear pump for high overrun
- Electronic sealed touch pad panel with simple-to-read buttons (production, cleaning, choice of flavours, etc...)
- Option of selecting the consistency of the ice-cream in order to use all kind of mixes
- Extraction tap with special "stop" device to optimize portions
- Specifically designed front part to facilitate the supply of large diameter cups/tubs
- The syrup light always displays the right fluidity and level of the syrups
- Side cone counter available on request, at extra charge
- Electrical, refrigeration and soundproofing system in conformity with international standards
- Sturdy, anti-rust treated frame and stainless steel panels
- Front cupboard for the syrup containers. Three special pumps guarantee the proper/right and constant flow of the syrup to the extraction tap
- Easy-to-clean and disassemble

MODEL	Hourly output		Tank capacity litres	Flavours	Syrups	Electric power			Installed power kW	Condenser	Net weight in kg.
	Litres	130 cc. portions				Volt	Phases	Cycles			
AES 381/p RAINBOW	61	470	18	1	3	380	50	3	3,3	Air or Water	220
AES 381/p/SP COLORE	61	470	18	1	3	380	50	3	3,3	Air or Water	245

Different electric specifications upon request and with price-surcharge.
 Performances featured by a room temperature of 25°C and a temperature of the cooling water of 20°C. Performance data can vary significantly according to ambient conditions.

Accessories and point of sales material

We have provided the Rainbow and Colore machines with a purpose designed and dedicated ice-cream sales point. The attractive and eye-catching accessories and point of sales material will make the perfect place for peak profit!
