

Thinking of you

 **Electrolux**

Electrolux Professional
the Cleaning Cloth and Mop Specialists
- for all fabrics from
Microfibre to Cotton

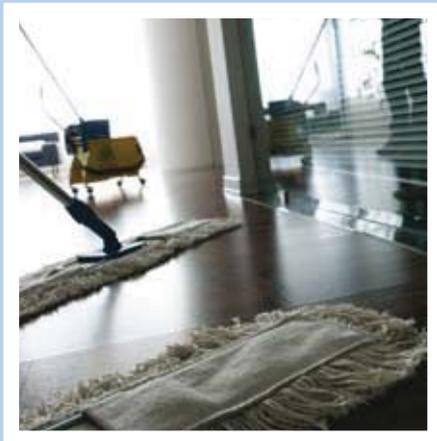

A person wearing a white t-shirt, red shorts, and white rubber shoes is mopping a light-colored wooden floor. The mop has a long black handle and a rectangular head with a white and red patterned cloth. The person is captured in a side profile, moving from left to right across the frame. The background is a plain, light-colored wall.

A fresh approach

Take control with the Electrolux cost-effective process for washing mop heads

Smart solutions just for you: the mop machines

Every laundry is different. That is why we have created such an extensive range of products to ensure that you can choose the machine that meets your needs. The dedicated mop and microfibre programmes of Electrolux machines respect the fibre preventing residual detergent and damage in the drying process that render the material useless.

Cleaning companies

Improve your profitability with the Electrolux mop machines. Fast and efficient mop cleaning means reduced stock of mops together with energy, water and detergent savings. Plus, you can wash your cleaning staff workwear on site by selecting one of the specially designed cleaning programs of the Compass® Control.

Childcare and nursing homes

The most demanding hygiene standards in nursing homes and children's day nurseries are met with Electrolux mop machines.

Hospitals and clinics

Electrolux mop machines are designed to meet the highest hygiene standards, therefore minimising risks and increasing patients well-being and recovery.

Food Hygiene

Food processing industries as well as supermarkets must maintain a high standard of hygiene, whilst delivering efficient productivity levels. Electrolux mop machines satisfy both of these criteria.

The mop cleaning process that makes every day easier

Meeting your specific cleaning needs is this simple... Efficient Floor Cleaning is as easy as one-two-three. It gives you and your staff more control over the process for greater flexibility — saving time and money while ensuring safer, simpler cleaning routines. It is a sound investment that soon pays for itself. What's more, you can count on cleaning results that are significantly better than you are used to.

Efficient Floor Cleaning could not be easier to introduce into your cleaning operation

All you need is a stock of mop heads, an Electrolux mop washer extractor, and an automatic detergent dosing system. If you prefer cleaning with dry mops, an Electrolux tumble dryer is the answer. Efficient Floor Cleaning works like this:

1. Load the used mop heads into the mop washer extractor. Select the preferred mop programme and start the wash process. The mop heads are washed and prepared exactly to your needs, for example, impregnated with the agents of your choice. Use the tumble dryer if you prefer dry mop cleaning.
2. Remove the freshly laundered mop heads from the mop washer extractor (or tumble dryer if you prefer dry mop heads). The mops are now perfect for damp mop cleaning — and ready for the next cleaning shift.
3. Use the mop heads to quickly and easily sweep away dirt, dust and grit. There is no heavy lifting of water buckets or wringing of cloths or swabs and there is no contact with harmful chemicals. The result is cleaner floors that stay cleaner for longer, compared to using other cleaning methods.

Ergonomic, reliable, and high performance

Electrolux professionals, by taking care of every little detail, have dedicated themselves to providing you with safe and worry-free machines.

Taking control saves time and money

With an Efficient Floor Cleaning, you will reduce the amount of time and money you spend keeping floors clean. Cleaners no longer have to include buckets of water and detergents in the cleaning trolley. The prepared mop heads also mean that a larger area can be cleaned per hour. Better results with less cleaning translates into money saved.

Respect for the environment

Electrolux laundry machines are designed to be environmental friendly with reduced water and energy consumption. In addition, an automatic detergent dosing system minimises the use of chemicals.

Flexible, easy-to-use mop programs for total control

Electrolux mop washer extractors feature special programmes for dry, damp or wet mops made from a wide variety of materials such as microfibre, polyester, cotton or blended material. The machines are available with two different control systems: the Compass® Control which has a number of specially designed fixed cleaning programs and partly programmable cleaning programs or Clarus® Control which is a fully programmable microprocessor.

Highest reliability and performances

Reliability and high performance is guaranteed by the easy cleaning operations of the heating elements. These elements are conveniently folded in a stainless steel plate in order to prevent the lint from clogging up and are easily accessible for cleaning from the drum.

Drum cut out

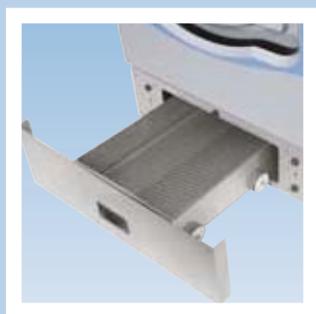

Shielded heating elements

Designed and built to meet the mop challenge

Choose the equipment specifically designed to meet the demanding requirements of washing mop heads. The Electrolux range includes mop washer extractors and tumble dryers, with options and accessories to meet your specific needs. You can count on safe, easy operation and a long service lifecycle.

The special mop washer extractor includes a special wash program package (3 mop programs and 4 general programs), special heating elements, a special inner drum and an electric drain valve for quick drainage.

Taking care of lint

Lint build-up is one of the biggest challenges when it comes to washing mop heads. This is why we recommend our specially designed, stainless steel lint collector which prevents lint from entering the sewage system. For added convenience, the filter is easily removed for lint removal and cleaning.

Automatic detergent dosing device

Electrolux mop washer extractors are designed for liquid or powder detergents. They are also prepared for connection to an automatic detergent dosing system. This option ensures that the right amount of detergent, solvent or impregnating agent is used for each load — giving you reliable wash results, cost savings and a more environmentally-friendly operation.

Certus Management Information System™ (CMIS)

Innovative software from Electrolux which allows you to connect machines to a network to monitor all operating costs and program & consumption data - validating every processed batch.

A smart investment that pays off

Efficient Floor Cleaning rapidly pays for itself. The return on investment depends on several factors such as: the floor area to be cleaned; the type, size and number of mop heads you require; and the detergents and impregnating agents used. Mop heads can usually withstand hundreds in case of microfibre and thousands in case of cotton of washes before they need replacing. You can rest assured that the service life of your Electrolux mop washer extractor will be long and trouble-free.

Contact Electrolux Professional for a tailor-made solution!

Electrolux range of mop washer extractors and tumble dryers includes the type and capacity that best suits your needs.

The process time for a 90 degree microfibre program varies between 70 - 80 minutes depending on the size of the washer extractor. For a 60 degree Mop Program the process time varies between 50 - 55 minutes. These figures are based on cold and hot water connection to the machine.

The image features four rolls of fabric with a distinct woven texture, stacked diagonally from top-left to bottom-right. The top roll is a dark blue, followed by a medium blue, a bright yellow, and a green roll at the bottom. The lighting is soft, highlighting the intricate patterns of the fabric. In the bottom-left corner, there is a semi-transparent grey rounded rectangle containing text.
